

REFLECTION PAPER

1. I didn't really face much challenge in this project except from the `getLetterGrade` method where I was confused on the get test score by index no, but I figured it out by trying and testing the code repeatedly.
2. I think the most helpful resource to me was the project description, and steps, it helped a lot, and I learnt what most of these keywords in java actually mean when being. used in programming something.
3. `FINAL` — this signifies that its value cannot be changed after it is initialized.
4. `CONSTANT` - A variable whose value cannot be modified after it is assigned.
5. `METHOD` - A function that is associated with a particular object and operates on its data.
6. `METHOD PARAMETER` - A variable declared within a method's definition that acts as a placeholder for data passed to the method when it's called.
7. `METHOD ARGUMENT` - The actual value or data provided when calling a method.
8. `RETURN` - A statement used within a function or method to specify the value it sends back after its execution.
